

SIGNATURE GATEWAY FEATURE

The accompanying rendering is a very preliminary schematic drawing of a gateway architectural feature that Developer would like to create at the corner of the Project site – at US 421 and CR 300 S. (The approximate location is shown on the Conceptual Development Plan in that section of this submittal.)

The intent, whatever the ultimate design, is to create an attractive and functional architectural signature feature, most likely containing some type of water element, which would tastefully identify the Project as something special.

GATEWAY FEATURE
